

Chemistubes flask ø55x100

by Teresa Sapey

CHEMISTUBES relies on the concept of “decontextualization” to create a new object. By increasing its size, using different materials than the original, and repurposing it from its original use, a laboratory container has been transformed into a designer planter that can be used for both **indoor and outdoor** decoration. Specifically, this was achieved by utilizing ecological resin made from polyethylene and applying the rotational molding technique.
